

NOTICE

To the residents of Stewart County, this is to inform the county of the protocol of the Stewart County Highway Department's procedures during inclement weather.

- Salt slows down its melting strength at 21 degrees and stops working at 15 degrees.
- We are not able to use salt on tar & chip or gravel roads.
- We are only able to use de-icing salt on roads that are paved hot-mix roads. These are roads with a yellow line down the center. This does not include state roads which are maintained by Tennessee Department of Transportation (TDOT).

We work closely with the Stewart County School System's Transportation Director, some children live on non-county maintained roads and the school system has to look out for the safety of all students.

Thank you,
Ronnie Sumner, Highway Superintendent
